1010 Gen 3 Tester Programming

1. Copy desired version of the Tester hex file to a USB flash drive.
2. Rename file on USB flash drive to "image.hex" (bootloader only looks for that filename)
3. Insert USB flash drive in USB connector on side of 1010 Tester
4. Press and hold programming switch located in hole on rear panel
5. Press and release RESET button on front panel
6. Release programming switch
7. Should see activity on USB flash drive when working. May have to repeat steps 4 - 6.
8. Wait for controller to be programmed and LCD lights up and shows the booting sequence that indicates the FW version and actions.
9. Remove USB flash drive and you're done.
